

Chapter 4

4-2. Using (2-26) with the help of Sec. A-5,

$$G(f) = A_c M(f) = 50 [-j\delta(f-1000) + j\delta(f+1000)]$$

Substituting this into (4-15) and using $\delta(-f) = \delta(f)$,
 the voltage spectrum of this DSB-SC signal is

$$S'(f) = -j25\delta(f-f_c-1000) + j25\delta(f-f_c+1000) \\ -j25\delta(f+f_c-1000) + j25\delta(f+f_c+1000)$$

4-5 Cont'd

$$(b) \quad v_2(t) = \operatorname{Re}\{g_2(t) e^{j\omega_c t}\}$$

$$\text{where } g_2(t) = \frac{1}{2} g_1(t) * h(t) \leftrightarrow G_2(f) = \frac{1}{2} G_1(f) K(f)$$

$$\text{and } h(t) = \mathcal{F}^{-1}[K(f)]$$

$$\text{Also, } H(f) = \frac{1}{2} [K(f - f_c) + K^*(-f - f_c)]$$

$$\neq K(f) = \begin{cases} 2, & |f| < B_T/2 \\ 0, & f \text{ elsewhere} \end{cases}$$

Evaluate $h(t)$:

$$h(t) = \int_{-\frac{B_T}{2}}^{\frac{B_T}{2}} \frac{2}{2} e^{j2\pi f t} df = 2B_T \frac{\sin(\pi B_T t)}{(\pi B_T t)}$$

$$\text{Know that } g_1(t) = A \Pi\left(\frac{t}{T}\right) = A \begin{cases} 1, & |t| < T/2 \\ 0, & t \text{ elsewhere} \end{cases}$$

$$\Rightarrow g_2(t) = \frac{1}{2} g_1(t) * h(t) = \frac{1}{2} \int_{-\frac{T}{2}}^{\frac{T}{2}} A \frac{2B_T}{2} \frac{\sin[\pi B_T(t-\lambda)]}{[\pi B_T(t-\lambda)]} d\lambda$$

$$\text{Let } \lambda_1 = \pi B_T(t-\lambda) \Rightarrow d\lambda_1 = -\pi B_T d\lambda$$

$$\begin{aligned} \Rightarrow g_2(t) &= A B_T \int_{\pi B_T(t+\frac{T}{2})}^{\pi B_T(t-\frac{T}{2})} \frac{\sin \lambda_1}{\lambda_1} \left(-\frac{1}{\pi B_T} d\lambda_1\right) \\ &= \frac{A}{\pi} \left[-\int_{\pi B_T(t+\frac{T}{2})}^0 \frac{\sin \lambda_1}{\lambda_1} d\lambda_1 - \int_0^{\pi B_T(t-\frac{T}{2})} \frac{\sin \lambda_1}{\lambda_1} d\lambda_1 \right] \end{aligned}$$

$$\neq g_2(t) = \frac{A}{\pi} \left[+\operatorname{Si}[\pi B_T(t+\frac{T}{2})] - \operatorname{Si}[\pi B_T(t-\frac{T}{2})] \right]$$

$$\text{and } v_2(t) = \operatorname{Re}\{g_2(t) e^{j\omega_c t}\}$$

4-5 Cont'd (b.)

Thus,
$$v_2(t) = \frac{A}{\pi} \left\{ \text{Si} \left[\pi B_T \left(t + \frac{T}{2} \right) \right] - \text{Si} \left[\pi B_T \left(t - \frac{T}{2} \right) \right] \right\} \cos(\omega_c t)$$

(c.) When $B_T = \frac{4}{T}$

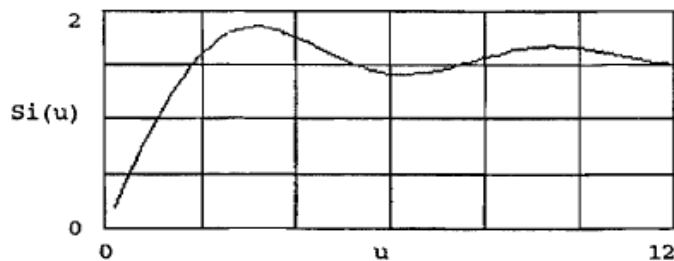

$$v_2(t) = \frac{A}{\pi} \left\{ \text{Si} \left[2\pi \left(\frac{2t}{T} + 1 \right) \right] - \text{Si} \left[2\pi \left(\frac{2t}{T} - 1 \right) \right] \right\} \cos(\omega_c t)$$

This is plotted with the help of the $\text{Si}(u)$ function. (See p. 232 of Abramowitz and Stegun for a description of the $\text{Si}(u)$ function.)

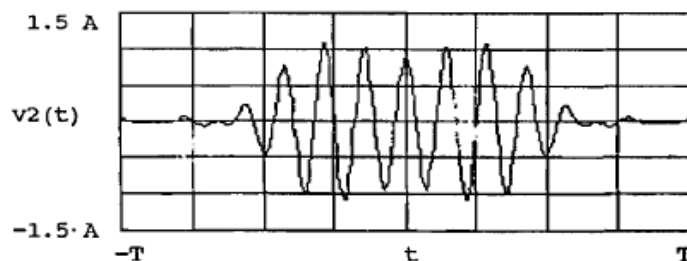

Using MathCAD we get:

$$A := 1 \quad T := 1 \quad \omega := 2 \pi \cdot 7 \quad u := 0, 0.2 \dots 12$$

$$\text{Si}(u) := \int_{0.001}^u \frac{\sin(x)}{x} dx \quad t := -T, -T + 0.01 \dots T$$

$$v_2(t) := \left[\frac{A}{\pi} \cdot \left[\text{Si} \left[2 \pi \left[2 \cdot \frac{t}{T} + 1 \right] \right] - \text{Si} \left[2 \cdot \pi \cdot \left[2 \cdot \frac{t}{T} - 1 \right] \right] \right] \right] \cos(\omega t)$$

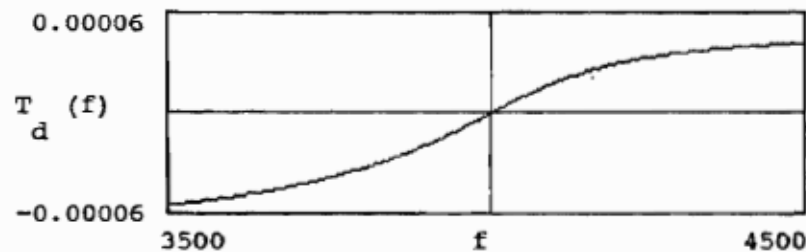

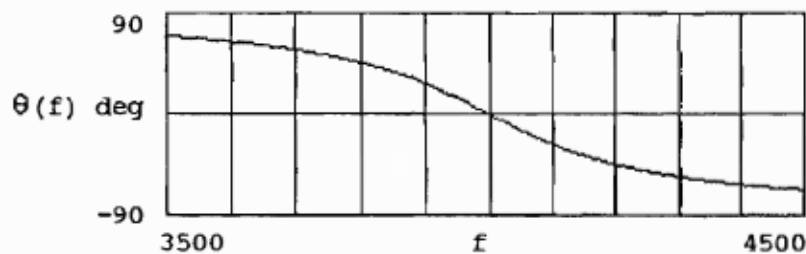

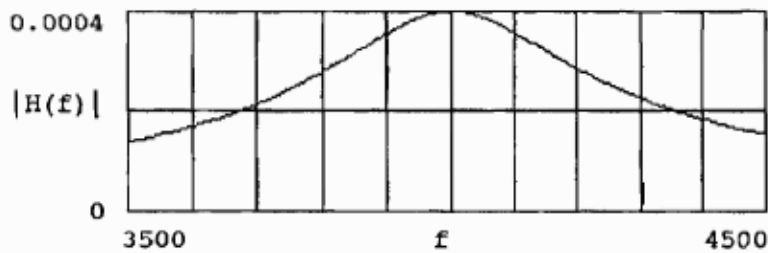

4-7.

$$\begin{aligned}
 R &:= 400 & L &:= 1.583 \cdot 10^{-3} & C &:= 1 \cdot 10^{-6} \\
 (a) \quad f_0 &:= \frac{1}{2 \cdot \pi \sqrt{L \cdot C}} & f_0 &= 4 \cdot 10^3 & Q &:= R \sqrt{\frac{C}{L}} & Q &= 10.054 \\
 B &:= \frac{f_0}{Q} & B &= 397.887
 \end{aligned}$$

$$\begin{aligned}
 (b) \quad f &:= 3500, 3504 \dots 4500 & \text{rad} &\equiv 1 & \text{deg} &\equiv \frac{\text{rad}}{\pi} \cdot 180
 \end{aligned}$$

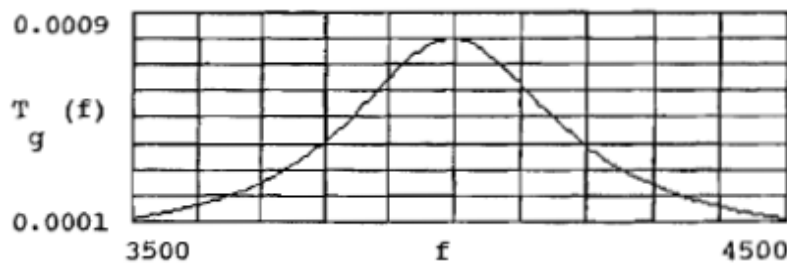

$$H(f) := \frac{j \cdot 2 \cdot \pi \cdot f}{(j \cdot 2 \cdot \pi \cdot f)^2 + \left[2 \cdot \pi \cdot \frac{f_0}{Q} \right] \cdot (j \cdot 2 \cdot \pi \cdot f) + (2 \cdot \pi \cdot f_0)^2}$$

$$\begin{aligned}
 \Theta(f) &:= \arg(H(f)) \\
 T_d(f) &:= \frac{1}{-2 \cdot \pi \cdot f} \cdot \Theta(f)
 \end{aligned}$$

4-7
Cont'd

$$(c) \quad T_g(f) := \frac{1}{-2\pi} \frac{d}{df} (\theta(f) \text{ rad})$$

(d.) The group delay variation over the 200 Hz signal bandwidth (about 4 kHz) is about 0.2 msec. The period of a 200 Hz signal is 5 msec. Thus, the group delay variation is negligible and, consequently the distortion is negligible.

4-9. (a) $s(t) = \text{Re}\{500e^{j\omega_c t}\} + \text{Re}\{-j100e^{j(\omega_c+\omega_m)t} + j100e^{j(\omega_c-\omega_m)t}\}$

$$s(t) = \text{Re}\left\{500\left[1 - j(2j)\frac{100}{500}\left(\frac{e^{j\omega_m t} - e^{-j\omega_m t}}{2j}\right)\right]e^{j\omega_c t}\right\}$$

$$= \text{Re}\left\{500\left[1 + \frac{2}{5}\sin(\omega_m t)\right]e^{j\omega_c t}\right\} \quad \text{AM}$$

$$\Rightarrow \underline{g(t) = 500 + 200\sin(\omega_m t)}, \quad \underline{m(t) = 0.4\sin(\omega_m t)}$$

(b.) $x(t) = \text{Re}\{g(t)\} = \underline{500 + 200\sin(\omega_m t)}, \quad y(t) = \text{Im}\{g(t)\} = \underline{0}$

(c.) $R(t) = |g(t)| = \underline{500 + 200\sin(\omega_m t)}, \quad \theta(t) = \angle g(t) = \underline{0^\circ}$

(d.) $P = \frac{1}{50} \langle |g(t)|^2 \rangle = \frac{1}{100} \left[(500)^2 + 2 \times 10^5 \langle \sin \omega_m t \rangle + (200)^2 \langle \sin^2 \omega_m t \rangle \right]$

$$\Rightarrow \underline{P = 2,700 \text{ watts}}$$

4-10. **NOTE:** $\Rightarrow \delta(f) = 2\pi \delta(\omega)$

$$\begin{aligned}
 \text{(a.) } S(f) &= \mathcal{F}\{s(t)\} \\
 &= 100 \mathcal{F}\{\sin(\omega_c + \omega_a)t\} + 500 \mathcal{F}\{\cos \omega_c t\} \\
 &\quad - 100 \mathcal{F}\{\sin(\omega_c - \omega_a)t\} \\
 &= -j100\pi [\delta(\omega - (\omega_c + \omega_a)) - \delta(\omega + \omega_c + \omega_a)] \\
 &\quad + j100\pi [\delta(\omega - (\omega_c - \omega_a)) - \delta(\omega + (\omega_c - \omega_a))] \\
 &\quad + 500\pi [\delta(\omega - \omega_c) + \delta(\omega + \omega_c)] \\
 &= \underline{\underline{-j100\pi [\delta(\omega - (\omega_c + \omega_a)) - \delta(\omega + \omega_c + \omega_a)] + j100\pi [\delta(\omega - (\omega_c - \omega_a)) - \delta(\omega + (\omega_c - \omega_a))] + 500\pi [\delta(\omega - \omega_c) + \delta(\omega + \omega_c)]}}
 \end{aligned}$$

$$\text{(b.) } S(f) = \frac{1}{2} [G(f - f_c) + G^*(-f - f_c)] \quad (4-22)$$

$$\begin{aligned}
 G(f) &= \mathcal{F}\{500 - j200 \cos(\omega_a t)\} \\
 &= 500(2\pi \delta(\omega)) - j200\pi [\delta(\omega - \omega_a) - \delta(\omega + \omega_a)]
 \end{aligned}$$

$$\begin{aligned}
 \therefore S(f) &= 500\pi [\delta(\omega - \omega_c) + \delta(\omega + \omega_c)] \\
 &\quad - j100\pi [\delta(\omega - \omega_a - \omega_c) - \delta(\omega - \omega_a + \omega_c)] \\
 &\quad + j100\pi [\delta(\omega + \omega_a - \omega_c) - \delta(\omega + \omega_a + \omega_c)] \\
 &= \underline{\underline{500\pi [\delta(\omega - \omega_c) + \delta(\omega + \omega_c)] - j100\pi [\delta(\omega - \omega_a - \omega_c) - \delta(\omega - \omega_a + \omega_c)] + j100\pi [\delta(\omega + \omega_a - \omega_c) - \delta(\omega + \omega_a + \omega_c)]}}
 \end{aligned}$$

4-14.

$$B := 100 \quad f := 10, 20 \dots 1000 \quad \text{rad} = 1 \quad \text{deg} = \frac{\text{rad}}{\pi} 180$$

$$H1(f) := \frac{1}{\left[1 - \left(\frac{f}{B}\right)^2\right] + j \left[\sqrt{2} \frac{f}{B}\right]}$$

$$\theta_1(f) := \arg(H1(f))$$

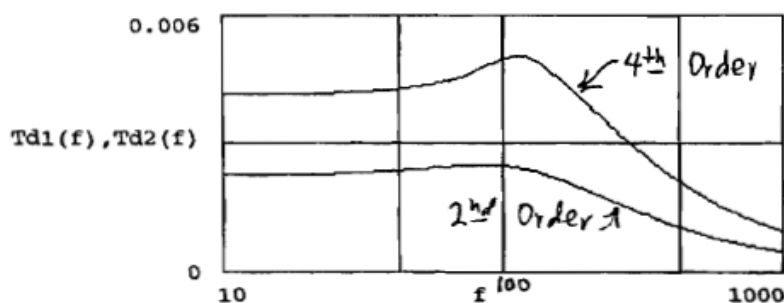

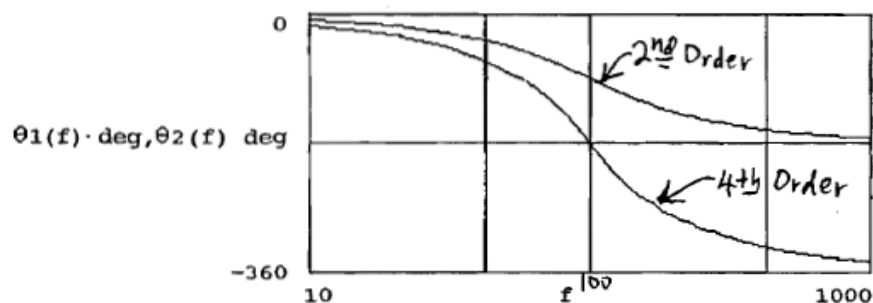

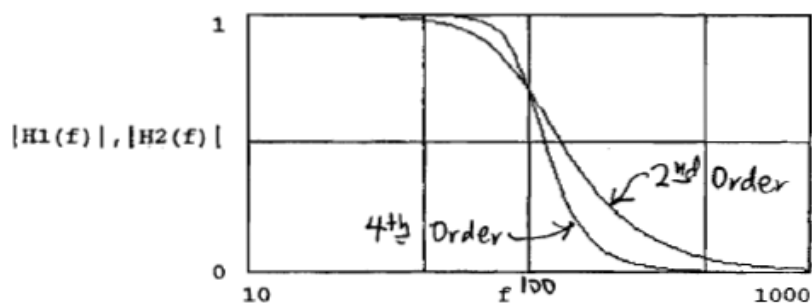

$$Td1(f) := \frac{1}{-2 \cdot \pi \cdot f} \cdot \theta_1(f)$$

$$H2(f) := \frac{1}{\left[1 - \left(\frac{f}{B}\right)^2 + 0.765j \frac{f}{B}\right]} \cdot \frac{1}{\left[1 - \left(\frac{f}{B}\right)^2 + 1.848j \frac{f}{B}\right]}$$

$$\theta(f) := \arg(H2(f))$$

$$\theta_2(f) := \text{if}(f < 100, \theta(f), \theta(f) - 2 \cdot \pi)$$

$$Td2(f) := \frac{1}{-2 \cdot \pi \cdot f} \cdot \theta_2(f)$$

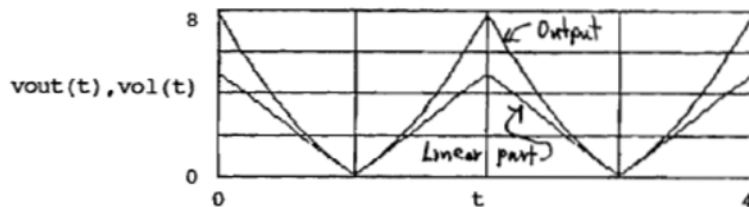

4-17. $t := 0, 0.1 \dots 4$ $m := 1 \dots 6$

(a.)

$$vin(t) := \frac{1}{2} + \frac{4}{\pi^2} \left[\sum_m \left[\frac{\cos((2m-1) \cdot \pi \cdot t)}{(2m-1)^2} \right] \right]$$

Note: $vin(t)$ is the Fourier series for a triangle waveform.

$$vout(t) := 5 \cdot vin(t) + 1.5 \cdot (vin(t))^2 + 1.5 \cdot (vin(t))^3$$

$$vol(t) := 5 \cdot vin(t) \quad \text{<-----Linear part of the output.}$$

(b.)

$$M := 5 \quad N := 2^M \quad N = 32 \quad k := 0 \dots N-1 \quad T := 2$$

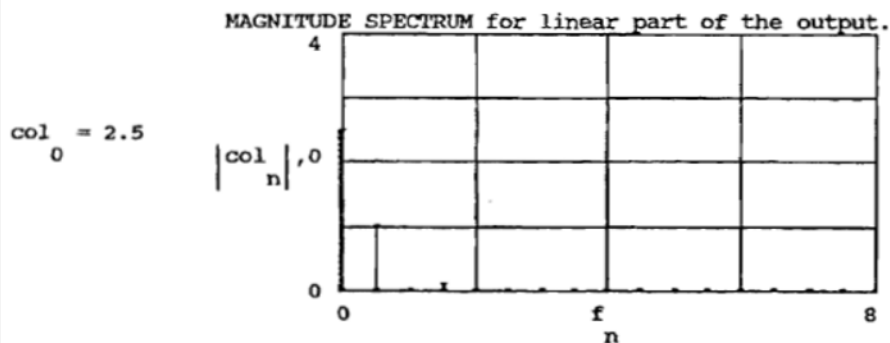

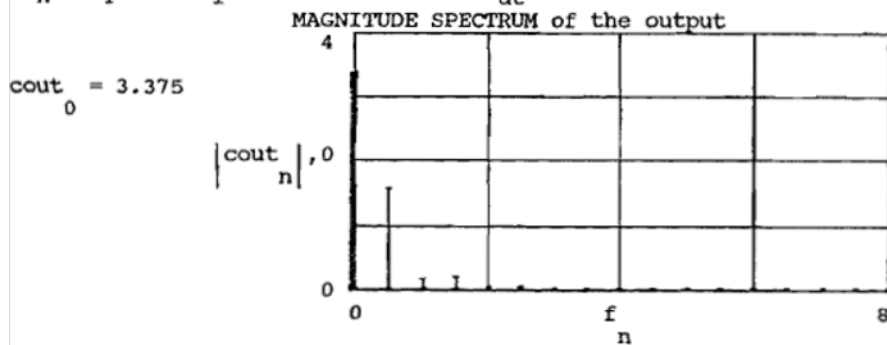

$$dt := \frac{T}{N} \quad dt = 0.063 \quad t_k := k \cdot dt$$

$vo_k := vout(k \cdot dt) \quad vol_k := vol(k \cdot dt) \quad n := 0 \dots N-1$

Since the signal is periodic, the spectrum will consist of delta functions (which can't be plotted directly since the delta function has an infinite value). However the weights of the delta functions are finite and can be plotted. The weights may be obtained from the complex Fourier series coefficients. Furthermore, the complex Fourier series coefficients may be calculated using the FFT by substituting (2-178) into (2-186). Thus,

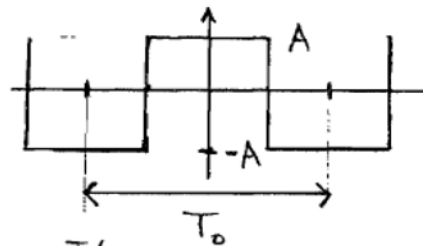

$cout_n := \left[\frac{1}{\sqrt{N}} \right] \cdot icfft(vo)_n \quad col_n := \left[\frac{1}{\sqrt{N}} \right] \cdot icfft(vol)_n$

$f_n := \frac{n}{T} \quad f_n = 0.5 \quad fs := \frac{1}{dt} \quad fs = 16$

4-20. The output is a square wave as shown

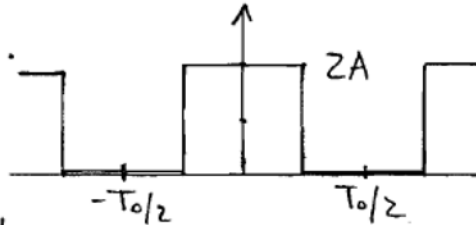

$$v(t) = \sum_{n=0}^{\infty} V_n \cos(n\omega_0 t)$$

where, using (2-96),

$$b_n = 0 \quad \text{and} \quad a_n = V_n = \frac{2}{T_0} \int_{-T_0/2}^{T_0/2} v(t) \cos(n\omega_0 t) dt$$

Since we are only interested in V_n for $n \geq 1$, we can shift the DC level of the waveform to make the integral easier to evaluate and get the V_n will remain the same for $n \neq 0$.

$$V_n = \frac{2}{T_0} \int_{-T_0/4}^{T_0/4} 2A \cos(n\omega_0 t) dt$$

$$= \frac{2}{T_0} (2A) \frac{\sin(n\omega_0 t)}{n\omega_0} \bigg|_{-T_0/4}^{T_0/4} = \frac{4A}{n2\pi} 2 \sin\left(\frac{n\pi}{2}\right)$$

$$\Rightarrow V_n^2 = \begin{cases} 0, & n \text{ even} \\ \left(\frac{4A}{n\pi}\right)^2, & n \text{ odd} \end{cases} = \frac{4A}{n\pi} \begin{cases} 0, & n = \text{even} \\ +1, & n = 1, 5, 9, \dots \\ -1, & n = 3, 7, 11, \dots \end{cases}$$

Using (4-47)

$$THD \% = \sqrt{\frac{\sum_{n=2}^{\infty} V_n^2}{V_1^2}} \times 100 = \sqrt{\frac{\sum_{n=3}^{\infty} \left(\frac{4A}{n\pi}\right)^2}{\left(\frac{4A}{\pi}\right)^2}}$$

4-20. Cont'd

$$THD\% = \sqrt{\sum_{\substack{n=3 \\ n=\text{odd}}}^{\infty} \frac{1}{n^2}} \times 100 = \underline{\underline{48.3\%}}$$

Check:

Using programmable calculator

$$\begin{aligned} THD\% &= \sqrt{\frac{\text{Total Power} - \left(\frac{V_1}{\sqrt{2}}\right)^2}{\left(\frac{V_1}{\sqrt{2}}\right)^2}} \times 100 \\ &= \sqrt{\frac{A^2 - \left(\frac{4A}{\pi\sqrt{2}}\right)^2}{\left(\frac{4A}{\pi\sqrt{2}}\right)^2}} \times 100 \\ &= \sqrt{\frac{\pi^2 - 8}{8}} (100) = \sqrt{0.2337} (100) = \underline{\underline{48.3\%}} \end{aligned}$$

$$\begin{aligned} \underline{4-23.} \quad s(t) &= A_c [m(t) \cos \omega_c t \mp \hat{m}(t) \sin \omega_c t] \\ &= \text{Re} \{ A_c [m(t) \pm j \hat{m}(t)] e^{j\omega_c t} \} \end{aligned}$$

$$\Rightarrow g(t) = A_c [m(t) \pm j \hat{m}(t)] = R(t) \angle \theta(t)$$

Output of Envelope Detector is

$$v_{out}(t) = kR(t) = k|g(t)|$$

$$\Rightarrow v_{out}(t) = kA_c \sqrt{m^2(t) + \hat{m}^2(t)} \neq k m(t)$$

The output is distorted.

4-26.

$$\frac{d\theta_e(t)}{dt} = \frac{d\theta_i(t)}{dt} - k_d k_v \theta_e(t) * f(t)$$

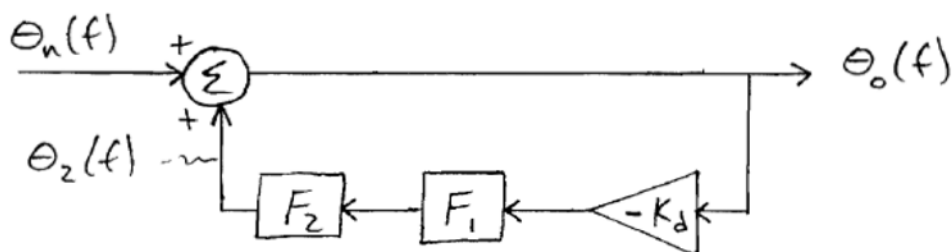

$$\Rightarrow s \theta_e(s) = s \theta_i(s) - k_d k_v \theta_e(s) F(s)$$

$$\text{or } \theta_e(s) = \frac{s \theta_i(s)}{s + k_d k_v F(s)}$$

Final value theorem:

$$\lim_{t \rightarrow \infty} \theta_e(t) = \lim_{s \rightarrow 0} [s \theta_e(s)] = \lim_{s \rightarrow 0} \frac{s^2 \theta_i(s)}{s + k_d k_v F(s)}$$

$$\Rightarrow \text{If } F(s) \neq 0 \Rightarrow \underline{\underline{\lim_{t \rightarrow \infty} \theta_e(t) = 0}}$$

4-28. (a.)

$$\theta_o(t) = \theta_n(t) + \theta_2(t)$$

$$\text{where } \theta_2(t) = \theta_o(t) [-K_d F_1(t) F_2(t)]$$

$$\Rightarrow \theta_o(t) = \theta_n(t) - K_d F_1(t) F_2(t) \theta_o(t)$$

$$\theta_o(t) [1 + K_d F_1 F_2] = \theta_n(t)$$

$$\frac{\theta_o(t)}{\theta_n(t)} = \frac{1}{1 + K_d F_1 F_2} = \frac{1}{1 + \frac{K_d K_v F_1(t)}{j 2 \pi f}}$$

\uparrow
 $F_2(t) = K_v / j 2 \pi f$

4-28.(a.) Cont'd
